

CITRUS COUNTY SNAG 'N' BAG AND FISHING LINE RECYCLING LOCATIONS

Why is monofilament a problem in the environment?

Because it is thin and often clear, it is very difficult for birds and animals to see and they can easily brush up against it and become entangled in it. Once entangled, they may become injured, may drown, may become strangled, or may starve to death. Many animals also ingest fishing line. If any wildlife is entangled, contact the Florida Fish and Wildlife Wild Alert Program at 1-888-404-3922.

 SNAG 'N' BAG Locations

Most monofilament is non-biodegradable. It lasts about 600 years.

Please use the Fishing Line Recycling Stations and help us avoid injuries to marine wildlife while putting your old fishing line to a beneficial use.
